

CSS Practice

1. Create .css file to use external css
2. Link it with your html file (use html file from practice1 or you can create new one)
3. Create your favicon and use it
4. Create at least 3 div classes
5. Use css commands such as border, margin, padding, height, width, display, position, sizing and font.
6. There should be at least three types of these commands (For example: for border commands you can use border, border-width, border-style).
7. Upload to github and send me a link.
